

Directions for putting together the Addition Chart

The addition chart is made of 9 separate pages that need to be printed on 11 x 17 papers. You will also need a piece of butcher paper that is 55 inches long. Start with the upper left piece first and then glue across the row. Each piece will overlap the previous piece so that there are no gaps in the finished chart. Once the first row is glued continue with the second row. You will be overlapping the bottom white border from the first row. Continuing this way will eliminate the need to trim each page.

Finished-----36 inches-----
