

FAM PROJECTS & CONSTRUCTION - PROJECT WORKFLOW

Overall Estimated Project Timeframes:
 Min. – 12 Weeks
 Max. – 45 Weeks

Notes

1. If the description of the work scope isn't clear or needs additional clarification or information, it may take up to 30 days to make a determination if the PDR can move forward.
2. Less complex projects will not need to go through permitting or have a heavy design component. More complex projects can require both design and permitting and can greatly extend the project timeframe.
3. See PDR Prioritization Process for additional information.

* -The goal is to inform the requestor of the PDR within 12 working days after the submission. However, if the review team believes additional information/investigation is needed, this timeframe can take longer.
